**“There is only one that counts better than I do.”**

**As one of the leading companies, ratio**tec** offers an extensive choice of formidable products with which banks and retail are able to efficiently handle cash. For system vendors and resellers from the POS branch the devices from ratio**tec** are a logical complement to their own product lines: regardless whether for counting of change or bank notes, or immediate, automatic testing of acceptable bank notes, ratio**tec** devices present high efficiency and certified security.**

As provider, using ratio**tec** hardware you ensure reliable and high-margin products for your customers. Through the sophisticated design each user immediately and intuitively handles the products – expensive training or time-consuming instruction is unnecessary in most cases. This saves your customers time and money and is only one of the many selling points for ratio hardware.

At Jarltech you get ratio**tec** hardware directly from stock from an official distributor. Along with the immediate availability, we of course offer you free demo devices for testing and presentation uses. Speak with our sales representative!

The ratio**tec** brand stands for competence and quality. High development competences, as well as especially high requirements for manufacturing quality characterize the German company. According to the company motto “Trust is good – ratio**tec** is better” - with ratio**tec** we offer every one of your customers the suitable solution for smooth and secure handling of cash.

Since its founding, the company headquartered in Essen has been developing innovative products for secure handling of money. The product range includes high quality test devices for immediate detection of counterfeit money, high performance bank note counting machines, as well as reliable coin counting and sorting machines. All devices are regularly checked for security and certified for automatic testing of bank notes. Many prominent companies from diverse branches, among others banks and savings banks, as well as car dealerships, gastronomic businesses, chemists’ shops, bakeries and super markets, are already included among the satisfied users.

**The new bank note counting machine rapidcount<sup>®</sup> M 120.**

With the rapidcount M 120 you count and test large amounts of cash daily without problem. The counting speed of up to 1,300 bank notes per minute and the high performance bank note insertion will impress you immediately. Even well used notes are processed without problem.

Quick removal of foreign objects. Easy cleaning of the sensors.

### ratiotec rapidcount S20/S60

- **Powerful counting machines for presorted Euro banknotes**
- **Counter and counterfeit money detector in one (S60)**
- **Very good detection of counterfeit money (security level 3) (S60)**
- **Counts very fast (up to 1,000 note/min.)**
- **Reliable quality**  
»Made in Germany«

The rapidcount S20/S60 series offers users a freely adjustable bundling function that sums fixed numbers of notes, a calculation function for counting larger amounts in several steps and an auto start/stop function.

The rapidcount S series is the perfect professional banknote counter for medium and large counting amounts. With a speed of 1,000 banknotes per minute, both the rapidcount S20 as well as the rapidcount S60 with counterfeit money detector count notes in large amounts effortlessly. The banknote feeder can hold up to 100 banknotes while the output holds up to 200 notes.

rapidcount counting machines count banknotes of one type fast and reliably. The number of counted note is displayed on a large display that is easy to read for all users. The S20 is a dedicated counting machine while the S60 features an additional counterfeit money detector that checks the safety markings of banknotes electronically and stops the counting process automatically, if a counterfeit note is found. Tests show counterfeit money detection rates of 100%, which equals security level 3.

Despite of a great performance and high speed, both devices are very compact – only 33 x 27 x 22 cm. Your customers can place them on every working place where they are always in reach. Naturally,

### ratiotec rapidcount S85

- **Fully automatic money counter for professional applications**
- **With magnetic code detector – counts unsorted notes**
- **Simultaneous counting and counterfeit money detection: Tests show 100% success**
- **Precise counting results – no calculators required**

magnetic code detection and detection of other security features offer maximum protection against counterfeit money so that this device passes the annual standard test with a success rate of 100%.

Speed is special advantage of the rapidcount S85 that offers user to save an enormous amount of time, as they do not have to sort the notes before counting them. This allows your customers to reduce working time and avoid counting errors (e.g. resulting from sorting errors) effectively. Users only have to insert the unsorted notes into the machine. Amount and sum of inserted banknote are displayed during and after the counting process.

A processing speed of up to 1,000 bank notes per minute make even frequent or larger counting processes a breeze. Moreover, with dimensions of 36x33x27 cm the device is easily placed in different work areas, while the device's particularly light and intuitive operation ensure high user acceptability.

The new ratiotec model: The rapidcount S85 with magnetic code detection. This professional machine provides perfect safety and precise counting results for areas that work with large amounts of cash. Magnetic code detection guarantees exact identification of banknote values and provides a tamper-proof test method for all Euro notes:

Every Euro note features a silver stripe (a.k.a. security thread) with magnetic properties. This security thread contains a code. Unlike other detectors, the rapidcount S85 does not only detect the presence of the magnetic code but reads its content as well. Using the information in the code, the rapidcount S85 can determine a banknote's value. Until now, this security feature has never been successfully forged, as it would require large investments in modern printing and manufacturing equipment. Another advantage is that this security feature does not show any signs of wear after long-time use.

The rapidcount S85 does not only check the magnetic code but also other security features of Euro banknotes. This combination of

**NEW!**

**ratiotec rapidcount T110/T115**

- Powerful money counters for small and medium banknote amounts
- Simultaneous counting and counterfeit money detection (T115)
- Fast and easy counting of different currencies (T110)
- Large display shows counted number of notes directly
- Compact for easy transport

but also read the notes' magnetic code, which results in very secure checks and makes it possible to detect the denomination automatically. This sophisticated combination protects your customers effectively against counterfeit money and pays off eventually.

Its compact housing of merely 25 x 23 x 20 cm and a weight of 6.5 kg make it suitable for applications in very confined space. With its integrated carrying handle, transport is incredibly convenient, in the office as well as in retail shops.

The new rapidcount T models help your customers to count small and mediums amounts of notes. Available in different versions, the T series is the perfect choice for multiple currencies (T110), optionally with direct magnetic code detection for 100% security against counterfeit money (T115).

Through the machine's high-performance bank note feeder your customers insert up to 200 bank notes in one stack. At any time the user adds more bank notes during operation, which is necessary at a speed of up to 1,000 bank notes per minute.

The rapidcount T110 counts medium amounts of pre-sorted notes very accurately. The results of all counted denominations are easy to read on its large display. If the user enters the denomination before counting, the device calculates the total as well. The model T115 offers even more efficiency, as it also counts unsorted. It counts euro notes and detects counterfeits fully automatically (security level 3). Its sensors do not only scan for all available UV and infrared features,

Specifications	Item number
• rapidcount T110, all currency	ratt110
• rapidcount T115, Euro bank note	ratt115

**ratiotec rapidcount M120/M130**

- Fully automatic banknote counter for large amounts
- Mixed banknote denominations – counts without sorting
- Extremely fast processing of up to 1,300 notes/min.
- Banknote checks for Euros and USD (M130) (security level 3 with 100% success rate in tests)
- Transport unit for minimum service expenses and intervals

The new rapidcount M series from radiotec includes powerful high-quality banknote counters for large amounts of notes. Both the M120 and the M130 are intended for banks and companies that have to count and examine large amounts of banknotes with different denominations. Its perfectly harmonised hardware components offer very low downtimes, and together with its user-friendly maintenance and operation design, any customer is easily convinced. The devices do not only offer high performance but also a high level of security against counterfeit notes.

At high speeds of up to 1,300 banknotes per minute, the rapidcount M120 detects Euros of different denominations fully automatically and in a single pass only. This allows to save precious working time and avoid counting errors (e.g. resulting from incorrectly sorted note) effectively. Users only have to insert the unsorted notes into the machine. Amount and sum of the inserted banknotes is displayed during and after the counting process. All devices of the M series, like the E and S series from radiotec, are equipped with a freely adjustable bundling function, a summation function and automatic start-stop.

The latest technology guarantees extensive checking of all notes: In addition to checking the whole set of magnetic, infrared and UV features, the M120 also examines the magnetic code. Every euro note features a silver stripe (a.k.a. security thread) with magnetic properties. This security thread contains a code that can be detected and interpreted by sensors used by M series devices. This kind of magnetic code detection guarantees exact identification of any banknote denomination and provides a tamper-proof test method for all euro notes.

Like all other radiotec models, the M series passed the annual standard money detection test with one-hundred percent accuracy. Each model is tested annually and given a security level. In order to implement even future security criteria, all standard models are equipped with an update function.

The easily accessible transport unit brings additional user comfort. Only a single step is required to open the housing. Users can remove jammed banknotes and paper clips easily and so eliminate malfunctions fast and effectively. An advanced user-friendly design allows continuous operation with large amounts of notes. Users need seconds only to clean paper residues off the sensors effectively reducing service time.

As a special feature, the rapidcount M130 offers counting and detection for both Euros and US dollars: in this case, the notes are examined for magnetic and UV features, as well as their paper density. As dollar notes do not contain magnetic codes, notes of different denominations have to be counted separately. The machine has a maximum capacity of 300 banknotes in the insert compartment and 200 notes at the output. Both M series models process up to 1,300 banknotes per minute. Their excellent performance is complemented with an equally high degree of security: Once the device detects a counterfeit note, it stops counting, so the user can remove it from the batch instantly. The device is certified for security level 3, which means that it detects most circulating counterfeit notes with the highest possible accuracy.

With a size of merely 38 x 38 x 34 cm, your customers do always find a place for it. Moreover, its display gives users easy navigation and permits exceptionally fast yet intuitive operation of the device.

- Great price/performance ratio

### ratiotec Soldi 460

- Ultra fast and reliable banknote checks
- For Euros and Suisse Francs
- Fully automatic and tamper-proof results
- 100% success rates in tests (security level 3)
- Checks notes in 0.3 seconds only
- Versions with update function and integrated battery available

The standard version is connected to a mains outlet while an optional version features an integrated rechargeable battery for mobile operation, a feature that expands the versatile applications of the Soldi 460 even further. Depending on optional features, the device has an integrated update function that provides the latest data for counterfeit money detection. In this case, the user simply connects the Soldi460 to a PC and installs the new firmware. Customers receive information on available updates after a successful registration directly from ratiotec.

The Soldi 460 is used to check banknotes directly at the POS. This way, counterfeit notes can be found directly and fraud or loss is effectively avoided. Compared to conventional testing methods (e.g. UV lamps), users do not have to interpret results. The device displays directly if the note is real or counterfeit. A combination of different security features offers maximum protection against counterfeit money so that this device passes the annual standard test with a success rate of 100%. The certificated security level 3 is awarded for the best test results in counterfeit money detection and even fulfils German central bank requirements.

At the same time, the Soldi 460 is extremely fast: for checking one banknote, it needs less than a third of a second. All Euro and Suisse Francs banknotes can be inserted in any direction. Output direction is freely selectable: depending on its application, users can configure the banknote output in the front or the rear side. Additionally, the Soldi 460 counts amount and value of all checked banknotes. When the device detects a counterfeited note, it signals the user acoustically and visually.

Specifications	Item number

• Soldi 460, with update function, battery	rats460bat

### ratiotec Soldi 600

- Ultra fast and reliable banknote checks
- For Euros, US dollars, Suisse Francs and British Pound
- Fully automatic and tamper-proof results
- Simultaneous counting of cash
- 100% success rates in tests (security level 3)
- Versions with update function and integrated battery available

The Soldi 600 is equipped with an update cable that ensures that it protects users against counterfeit money in the future as well. Using software updates (available at manufacturer side), your customers can equip the device with the latest software.

The flexible output can be configured for the front or the rear side, which makes the Soldi 600 also suitable to areas with limited space. The integrated rechargeable battery makes it possible to use it either over a mains socket or in mobile applications.

Your customer checks various banknotes directly at the POS with the Soldi 600. The device recognises Euros, Suisse Francs, British Pounds and US Dollars and shows users test results instantly. This way, counterfeit notes can be found directly and fraud or loss is effectively avoided.

Compared to conventional testing methods (e.g. UV lamps), users do not have to interpret results. The device displays directly if the note is real or counterfeit. When the Soldi 600 finds a counterfeit note, the user is signalled acoustically and with a red blinking LED. A combination of different security features offers maximum protection against counterfeit money so that this device passes the annual standard test with a success rate of 100%. The certificated security level 3 is awarded for the best test results in counterfeit money detection.

In addition to its fully automatic detection features, the Soldi 600 counts all inserted notes and detects currency and banknote values as well. Through a level menu, users can access the total amount of checked notes, the separate amounts of different notes and currencies, which are viewed directly on the large LCD display.

• Soldi 600, with update function, battery	rats600

### ratiotec Coinsorter CS50

- Professional coin counting and sorting machine
- Fast: Up to 200 coins per minute
- Counts and sorts all Euro and cent coins reliably
- Freely adjustable stops for coin rolls
- Large top-side coin insert

ously updated overview of the counting process and configuration. Operating a Coinsorter CS50 is also easy when filling coins: its large coin insert container that is located at the top of the machine allows users to fill large amounts of unsorted coins at once and during the counting process. The special coating of the coin transport paths within the device ensure seamless counting without cumbersome coin congestion.

Robust sorting mechanics ensure a long service life regardless of how often the device is used. The housing is made of impact-resistant plastic that survives many years of operation. Dimensions of merely 35 x 33 x 27 cm make the machine a compact companion at any location.

The CS50 is a sturdy coin sorter for catering and commercial applications. It counts reliably up to 200 Euro and cent coins per minutes and sorts then into separate removable containers. This makes the CS50 coin sorter the perfect machine to companies that have a small to medium throughput of coins.

The CS50 sorts coins very accurately: it can distinguish coins effectively by their different size. As every Euro and cent coins features different dimensions, coin size is a very conclusive criterion for fast sorting.

Counting amounts are adjustable, which provide a very practical feature for producing coin rolls: users can define suitable amounts of coins after which the counting process is stopped automatically until the respective container is emptied. In standard mode, the machine displays either the total sum in Euros or the number of counted coins. The large single-line LCD display is ergonomically integrated into the touch panel (see illustration) and gives users a professional and continu-

## DATALOGIC™

- Reliable Handheld scanner with laser, CMOS or CCD engine
- Scanners for installation and fixed mounted applications
- Mobile bar code terminals (DOS, Windows CE)

The inventor of the bar code offers an extensive range of bar code scanners and MDA devices for retail, production and logistics. Their high-quality hardware is not only robust, but satisfies all demands for flexibility and performance.

## METAPACE **NEW!**

- Reliable and fast POS printers
- Robust direct thermal printers for retail and warehouse
- Complete package including all accessories for immediate use

With Metapace, we offer you an exclusive brand for professional POS printers and hardware. Along with the outstanding technical performance, the complete package is exceptional as it ensures immediate installation, even by beginners.

## CITIZEN **NEW!**

Micro HumanTech

- POS direct thermal and dot matrix printers
- Label and ticket printers for desktop/midrange applications
- Mobile label printers for catering and field work

Known for reliable and impressive products, Citizen has been producing printers for POS and bar code applications for many years. Clever features as well as long durability guarantee professional results in point of sale and warehouse areas.

## Colormetrics **NEW!**

- High-quality POS systems with integrated touch screen
- Innovative colour scheme with alternate frames
- Robust, resistant aluminium housing

Colormetrics is a Taiwanese manufacturer of especially high quality and elegant POS systems with innovative colour schemes. The very sophisticated systems are suitable for all areas of trade and catering, and are available in many different elegant colours.

## MOTOROLA **NEW!**

PartnerSelect

- Hand-held scanners for POS and office applications
- Robust scanner for industry and production
- Wireless scan solutions, installation and special scanners

Motorola Symbol is the market leader in scanning and mobility solutions and is used especially by large companies worldwide. As ADC specialist, we are an official partner of Motorola and offer you all Symbol scanners always at favourable prices and directly from stock.

## BIXOLON®

- Stationary receipt printers and robust portable printers
- Printer for tickets, receipt and labels suitable for any application
- Professional customer displays for checkouts and information points

This manufacturer of receipt and label printers offers wide and interesting range of printers for different applications. Bixolon hardware is technically advanced and extremely cost-effective. Jarltech offers Bixolon printers as well as a wide range of matching accessories.

- Label printers for office and retail applications
- Industrial, midrange and portable label printers
- High-quality consumables for any application

Globally, Zebra is the leading label and bar code printer manufacturer. Their unrivalled product range of compact desktop printers, industrial and midrange label printers as well as original consumables serves all major companies worldwide in logistics, production and retail.

- Touchscreen monitors with a large choice of options
- Touchscreen POS systems with integrated PC
- Certified touchscreens for medical applications

As the inventor of the touchscreen, Elo has a great influence on the touchscreen market and keeps developing this technology further. High quality monitors and systems with integrated PCs from Elo are renowned for their robustness and reliability.

## Honeywell **NEW!**

- Professional laser scanner for handheld and stationary use
- CMOS imager and extremely fast 2D scanner
- Mobile data collection devices with and without Windows

The new brands Metrologic and Handheld Products have been united under the new brand »Honeywell Scanning and Mobility«. As official Honeywell distributor, we offer you the complete product line of hand scanners, installation scanners and mobile terminals.

## EPSON®

EXCEED YOUR VISION

- Receipt, multi-station or mobile printers
- Printers for monochrome and colour ticket, receipt and label printing
- Touch screen cash register systems and customer displays

The leader in the receipt printer market offers a vast range of POS printers, specialised printers as well as touch screen cash register systems for almost every application. Jarltech is the largest distributor of Epson POS devices in German speaking Europe.

## PRIMERA

TECHNOLOGY EUROPE™

- Professional colour inkjet label printers
- Digital colour laser printers for large colour labels
- Gold and silver foil printer for label finishing

Primera is the leader in photo-realistic printing of full-colour labels and their finishing. Known for easy-to-use systems with ergonomic design and high-end quality, the large American-based vendor develops solutions for every application possible.

## GLANCETRON

- Touchscreen monitors in various forms and sizes
- Touchscreen POS systems with integrated PC
- Special touchscreen hardware for individual demands

Jarltech is exclusive global distributor for Glanceatron hardware. A particularly large range of touch screens (from 8 to 19 inch) as well as compact high-quality PC POS systems make Glanceatron the perfect choice wherever durable and cost-effective POS hardware is required.

## Panasonic

ideas for life

- Touch screen cash register systems for retail and catering
- Ultra-silent and reliable complete cashier stations
- Top hardware solutions in brilliant design

State-of-the-art technical knowledge through years of experience and a large selection of hardware make the name brand manufacturer the right choice for your customers. Jarltech is official distributor for Panasonic touch screen POS systems in all of Europe.

## JARLTECH

- Bar code scanners and magnetic stripe technology
- POS keyboards, customer displays and accessories
- Cash drawers and compact POS touch systems

Jarltech has been our own brand for cash desk hardware for more than fifteen years now. Development by Jarltech Europe and Jarltech International combined with production in the Far East guarantee sophisticated design and high quality at competitive prices.

## PROMAG™

- RFID readers and writer / modules for installation
- Professional devices for time recording and access control
- Extensive range of RFID transponders and accessories

Promag offers a huge range of devices that read and process RFID tags and labels together with time recording and access control systems. For you, Jarltech offers Promag installation modules, portable readers and tags in various shapes and formats.

## **NEW** CASH BASES

- High quality cash drawers made of robust materials
- Different product series for diverse application areas
- Sophisticated ergonomics and customer-specific solutions

With more than 10,000 different products, Cash Bases offers the world's largest assortment of professional cash drawers. At Jarltech, you get a large selection of robust cash drawers and flip-lid drawers, but also individual solutions for your application.

## friendlyway **NEW**

Intelligent solutions for friendly communication

- Touch screen cash register systems for kiosk and signage solutions
- Self-service terminals individually in the CI of your customers
- Simple realisation of kiosk solutions without programming

With friendlyway kiosk terminals, you sell your customers brand quality from Germany and realise professional, first-class kiosk solutions. Jarltech offers you selected friendlyway products directly from stock for purchase or short-term leasing.

## Addimat **NEW**

Ihr Partner am Buffet

- Waiter locks for automatic identification
- Key readers for industrial applications
- Keys in diverse trendy colours

Addimat produces and sells professional complete catering and bar service systems. The Addimat waiter and pin locks offered by Jarltech are popular with personnel and management alike for their security, simple operation and robustness.

## Mogler

- Cash drawers of excellent quality and design
- Hinged-lid and desk-mounted drawers, top or front opening
- Special-purpose drawers and individual production

Mogler is one of the most recognised manufacturers of high-quality cash drawers. Mogler products offer a sophisticated design that satisfies even highest demands – a fact that made many large and professional retailers use cash drawers from Mogler.

## ratiootec **NEW**

- Bank note testing devices for the POS
- Bank note counting machines for commerce and banks
- Professional change sorting and counting devices

The certified ratiootec devices provide additional security and higher efficiency in retail. At Jarltech, you get all of the German brand manufacturer's testing, counting and sorting machines for change and notes of different currencies directly from stock.

## PrehKeyTec

- Cash register keyboards for various applications
- Programmable PC keyboards with alternative layouts
- Professional LCD monitors with integrated touch screen

Preh Key Tec is one of the major manufacturers of cash register and special-purpose keyboards for various applications. Preh Key Tec produces keyboards with different amounts of keys that have already been used for decades in retail and production.

## SCM

MICROSYSTEMS

- Smart card readers / writers for various standards
- Offline and online time recording systems with professional software
- Electronic signature applications and security software

SCM is known as the inventor of the PCMCIA standard and offers a large product range related to smart cards, time recording and contactless data collection. SCM's market leading position has become even stronger since the acquisition of Towitoko.

## Torex **NEW**

Defining customer experience

- Brand name cash drawers made of especially robust materials
- Well-known and established product line
- Sophisticated ergonomics and professional application

Torex is one of the leading providers of point of sale systems and high-quality components in Europe. At Jarltech, you get a large selection of robust and established Torex cash drawers, flip-top drawers and a variety of accessories directly from stock.
