SafeGuard D-Frame

The SafeGuard D-Frame mounting technology from Ergonomic Solutions provides the ultimate platform for mounting, mobility, security and charging of the latest generations of iPads, including the 4th generation iPad that interfaces with Apple's lightning connector.

Many applications across the in-store environment are feeling the undoubted consumer and operator appeal of the tablet revolution in retail. For example, MobilePOS is fast becoming the ultimate solution for assisted sales. With MobilePOS, shop staff can provide a personal shopping experience from assisting with enquiries through to the purchase itself. The D-Frame makes it simple to turn the stationary browsing tablet in its cradle into a hand held MobilePOS device for the store operator to complete the transaction.

Where mobility and flexibility is key, the D-Frame is the solution for mobile applications of all types including information points, queue busting and back office

use such as stock taking. The D-Frame provides the ideal environment for running a range of iPad based applications. However, continuous use can drain an iPad very quickly. D-Frame's ingenious design includes a robust charging cradle with easy tablet placement to engage the charging connector. A sturdy iPad press fit dock protects the 30-pin connector or the lightning connector and allows for reliable and stable repetitive docking.

Security is important for these devices and D-Frame offers you two different products to suit your application. A snatch resistant quick release lock or a slide & lock ClickSafe® security lock option cover all requirements: Whichever is chosen, your iPad is protected.

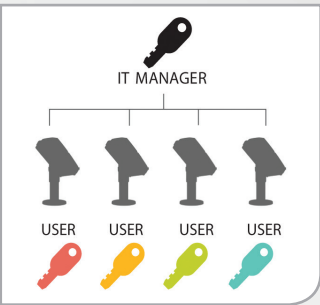

Our range of SafeGuard™ secure tablet mounting solutions are a comprehensive suite of products to provide the ultimate in style, security and flexibility for all mobile and fixed position tablet based applications.

Register & Retrieve™: Key Management

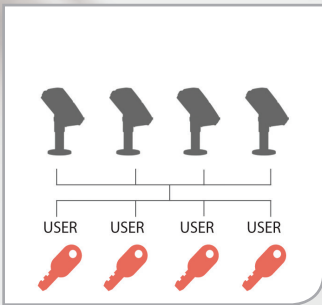

The D-Frame SPDL102 features the unique ClickSafe Register & Retrieve key management system. This simple, intuitive and free service provides a simple user interface for storing and managing key data. It enables an administrator to manage and update where and to whom keys are deployed and enable individuals to store their key data securely and arrange replacement keys quickly and easily. For more information on Register & Retrieve, please go to spacepole.com.

Ergonomic Solutions

Founded in 1996, Ergonomic Solutions has grown rapidly to become a global leader in the design, manufacture and supply of the most ergonomically advanced mounting and security solutions for a wide range of in-store, and mobile technology for markets including retail, banking, mass transit, and hospitality. Ergonomic Solutions has long been at the forefront of workspace planning and optimisation and our influential Ergonomics Consultancy has advised many of the major European retailers how to create a workspace which optimises accessibility, usability, safety and comfort for their staff and customers.

Our suite of SpacePole®, Telehook®, Spacedec®, ClickSafe® and SafeGuard™ patented technology products are ergonomically designed to allow movement with rotation, tilt and height adjustable capabilities. From the shop floor to the management suite, we can deliver a solution that ensures that your IT investment makes the best use of the available workspace whilst simultaneously being protected from damage and theft.
